

Vard Academy | SeaQ Green Pilot - Basic Training

This one-day instructor-led training course will provide participants with the knowledge and skills to operate the Green Pilot feature on a fundamental level. The students will be taken step by step through the basics to understand the functionality to ensure that they gain both real- world and practical skills. This course requires no previous experience of our system. SeaQ Green Pilot is a highly functional, easy to use and easy to customize Energy Management System (EMS). Green Pilot helps improve energy efficiency of ships and fleet, which results in lower operational costs and improves competitiveness

Some of the features are:

Full SEEMP compliance, Emission reports (CO_x, SO_x, NO_x), Real-time data collection on board, Fleet wide monitoring and comparison using Online option and Modular energy savings applications added as needed for improved energy efficiency and realized savings.

Vard Academy | SeaQ Green Pilot - Basic Training

About Vard Academy

Vard Academy offers quality-proven training focused on the company's in-house developed products and solutions. Our courses combine theoretical learning and hands-on practical training. The participants also receive a valuable experience in fault finding and troubleshooting labs. Vard Academy's instructors have long experience with the products and solutions

they present, and are also involved in the development of our products. This way, our instructors combine in-depth knowledge of all aspects of our products - both technical and practical.

All product training courses by Vard Academy can be tailored and adapted to customer needs. Vard Academy offers an open schedule standard courses as well

as customized training. Courses can be held in our training facilities, or delivered on location - on board of en route vessels or at our customer's premises, allowing further customization and optimal time management.
