

# Vard Academy | SeaQ PMS - Fundamental Training

This one-day instructor-led training course will provide participants with the knowledge and skills to safely operate SeaQ PMS on a fundamental level. This course will give an understanding of the system's features and functions through a step by step study of the system. Practical lab exercises will ensure that participants gain experience of real-life operations. This course requires no previous experience of our system.

VARD's instructors have long experience with the products and solutions they present, and are also involved in the development of our products. This way, our instructors combine in-depth knowledge of all aspects of our products. Both technical and practical.

SeaQ PMS is a well-proven vessel power control, monitoring, and alarm system. It provides dynamic control of the ship's generators, main switchboard, as well as propulsion and other major power consumers.

# Vard Academy | SeaQ PMS - Fundamental Training

### About Vard Academy

Vard Academy offers quality-proven training focused on the company's in-house developed products and solutions. Our courses combine theoretical learning and hands-on practical training. The participants also receive a valuable experience in fault finding and troubleshooting labs. Vard Academy's instructors have long experience with the products and solutions

they present, and are also involved in the development of our products. This way, our instructors combine in-depth knowledge of all aspects of our products - both technical and practical.

All product training courses by Vard Academy can be tailored and adapted to customer needs. Vard Academy offers an open schedule standard courses as well

as customized training. Courses can be held in our training facilities, or delivered on location - on board of en route vessels or at our customer's premises, allowing further customization and optimal time management.
